1980 MATHEMATICS SUBJECT CLASSIFICATION

This is a corrected reprinting of the 1980 Mathematics Subject Classification. The corrections carried out since the second printing (in the 1979 Mathematical Reviews Index) include the following:

Section 03–XX has undergone some revision; in particular, the entries 03B48, 03B65, 03C07, 03C13, 03C57, 03C62, 03C68, 03E47, 03F07 and 03F40 are new. Section 78A57 was relabeled 78A97; section 81H05 was expanded into 81Hxx, with three subheadings. The remaining new entries are: 05B07; 10A50; 17A36, 17A75, 17D15, 17D20, 17D25, 17D92; 20F17; 31C35; 35J85, 35K85, 35L85; 41A80; 53C12; 57N13, 57Q12, 57R19; 65L50, 65L60, 65M50, 65M60, 65N50; 68D22; 70K40, 70K50, 70Q05; 73C60, 73D50, 73D70, 73E50, 73K03; 76A60, 76B40, 76D07; 78A60, 78A70; 80A32; 81D30, 81E20, 81E25; 82A31, 82A43, 82A51, 82A57, 82A68; 83C47, 83E50; 86A60; 90B50. There are 40 entries in which small changes in the description or additions in the cross references were carried out.

Instructions for using the 1980 Mathematics Subject Classification

These instructions apply uniformly to all fields listed. The main purpose of the classification is to help all readers to find the items of present or potential interest to them as readily as possible—in MR, in Zbl, or anywhere else where this classification system is used. The review of a paper or book should be printed in the section where it will receive the broadest attention from all readers possibly interested in it—these include both people working in that area and people who are familiar with that area and apply its results and methods elsewhere (inside or outside of mathematics). It will be extremely useful for both readers and classifiers to familiarize themselves with the entire classification system and thus to become aware of all the classifications of possible interest to them.

Every paper or book reviewed in MR receives precisely one "primary" classification number; it is simply the number of the section in which the review of the item will be printed. This section should be the one that covers the principal contribution. When a paper contains several principal contributions in different areas, the primary classification should cover the "most important" among them. A paper or book may receive one or several "secondary" classification numbers (or "cross-references"), to cover any remaining principal contributions, ancillary results, motivation or origin of the problems discussed, intended or potential field of application, or other significant aspects worthy of notice.

The "primary" principal contribution should be the one including the most important part of the work actually done in the paper. For example, a paper whose main overall content is the solution of a problem in graph theory, which arose in computer science and whose solution is (perhaps) at present only of interest to computer scientists, should receive its primary classification in 05C and a cross-reference in 68; conversely, papers whose overall content lies mainly in computer science will receive a primary classification in 68, even if they make heavy use of graph theory and prove several new graph theoretic results along the way.

For any paper or book with its primary classification in (i.e., printed in) an "applied" section (68 through 94), it is recommended to give a cross-reference in some mathematics section(s) (00 through 65) whenever that is appropriate. Do not use 00A89 as a primary classification.

There are two types of cross-references given after many classifications in the list. The first type is of the form "{For A, see X}"; if this appears in section Y, it means that for contributions described by A one should usually assign the classification X, not Y. The other type of cross-reference merely points out related classifications; it is of the form "[See also...]", "[See mainly...]", etc., and the classifications listed in the brackets may, but need not, be added to the classification of a paper, or they may be used in place of the classification where the cross-reference is given. The classifier will have to judge which classification is the most appropriate for the paper at hand.

32A05 Power series, series of functions
32A07 Special domains (Reinhardt, Hartogs, tube domains, etc.)
32A10 Holomorphic functions
32A15 Entire functions
32A17 Normal families
32A20 Meromorphic functions
32A22 Nevanlinna theory: growth estimates {For geometric theory, see 32H25, 32H30.}
32A25 Integral representation
32A27 Local theory of residues [See also 32C30.]
32A30 Other generalizations of function theory of one complex variable (should also be assigned at least one classification number from Section 30) {For functions of several hypercomplex variables, see 30G35.}
32A35 H^p-spaces [See also 32M15, 42B30, 43A85, 46J15.]
32A40 Boundary behavior
32A45 Hyperfunctions [See also 46F15.]
32A99 None of the above, but in this section

32Bxx Local analytic geometry [See also 13–XX and 14–XX.]

32B05 Analytic algebra and generalizations, preparation theorems
32B10 Germs of analytic sets
32B15 Analytic subsets of affine space
32B20 Semi-analytic sets and subanalytic sets
32B25 Triangulation and related questions
32B30 Local singularities [See also 14B05, 32C40, 32C42.]
32B99 None of the above, but in this section

32Cxx General theory of analytic spaces

32C05 Real-analytic manifolds, real-analytic spaces [See also 14G30, 58A07.]
32C10 Complex manifolds {For almost complex manifolds, see 53C15.}
32C15 Complex spaces
32C20 Normal analytic spaces
32C25 Analytic subsets and submanifolds
32C30 Integration on analytic sets and spaces, currents {For local theory, see 32A25 or 32A27.}
32C35 Analytic sheaves and cohomology groups [See also 14Fxx, 18F20, 55N30.]
32C36 Local cohomology of analytic spaces
32C37 Duality theorems
32C40 Singularities
32C42 Stratified sets, etc. [See also 32Bxx.]
32C45 Modifications, resolution of singularities [See also 14E15.]
32C99 None of the above, but in this section

32Dxx Analytic continuation

32D05 Domains of holomorphy
32D10 Envelopes of holomorphy
32D15 Continuation of analytic objects
32D20 Removable singularities
32D25 Non-Archimedean function theory
32D99 None of the above, but in this section

32Exx Holomorphic convexity

32E05 Holomorphically convex complex spaces, reduction theory
32E10 Stein spaces, Stein manifolds
32E15 Runge pairs
32E20 Polynomial convexity
32E25 Algebras of holomorphic functions [See also 30H05, 46J10, 46J15.]
32E27 Krasner-Tate algebras, etc. (algebras of holomorphic functions over non-Archimedean fields)
32E30 Holomorphic and polynomial approximation
32E35 Global boundary behavior of holomorphic functions
32E99 None of the above, but in this section

32Fxx Geometric convexity

32F05 Plurisubharmonic functions and generalizations [See also 31C10.]
32F10 q-convexity, q-concavity
32F15 Pseudoconvex domains
32F20 Geometric results on $\bar{\partial}$-Neumann problems [See also 35N15.]
32F25 Real submanifolds in complex manifolds
32F30 Pseudoconvex manifolds
32F99 None of the above, but in this section

32Gxx Deformations of analytic structures

32G05 Deformations of complex structures [See also 13D10, 16A58, 58H10, 58H15.]
32G07 Deformations of special (e.g. CR) structures
32G10 Deformations of submanifolds and subspaces
32G11 Deformations of singularities
32G13 Analytic moduli problems {For algebraic moduli problems, see 14D20.}
32G15 Moduli of Riemann surfaces, Teichmüller theory [See also 14H15, 30Fxx.]
32G20 Period matrices [See also 14H05.]
32G99 None of the above, but in this section

32Hxx Holomorphic mappings

32H05 Representative domains
32H10 Bergman kernel function
32H15 Invariant metrics and pseudodistances

32H20 Hyperbolic complex manifolds
32H25 Picard type theorems and generalizations {For function-theoretic properties, see 32A22.}
32H30 Value distribution theory in higher dimensions {For function-theoretic properties, see 32A22.}
32H99 None of the above, but in this section

32Jxx Compact analytic spaces {For Riemann surfaces, see 14Hxx, 30Fxx.}
32J05 Compactification
32J10 Algebraic dependence theorems
32J15 Compact surfaces
32J20 Algebraicity criteria
32J25 Transcendental methods of algebraic geometry [See also 14C30.]
32J99 None of the above, but in this section

32Kxx Generalizations of analytic spaces (should also be assigned at least one other classification number in this section)
32K05 Banach analytic spaces [See also 58Bxx.]
32K10 Non-Archimedean analytic spaces
32K15 Differentiable functions on analytic spaces, differentiable spaces [See also 58C25.]
32K99 None of the above, but in this section

32Lxx Holomorphic fiber spaces [See also 55Rxx.]
32L05 Holomorphic fiber bundles and generalizations
32L10 Sheaves and cohomology of sections of holomorphic vector bundles, general results [See also 18F20, 55N30.]
32L15 Bundle convexity [See also 32F10.]
32L20 Vanishing theorems
32L99 None of the above, but in this section

32Mxx Complex spaces with a group of automorphisms
32M05 Complex Lie groups, automorphism groups of complex spaces [See also 22E10.]
32M10 Homogeneous complex manifolds [See also 14M17, 57T15.]
32M15 Hermitian symmetric spaces, bounded symmetric domains [See also 22E10, 22E40, 53C35, 57T15.]
32M99 None of the above, but in this section

32Nxx Automorphic functions [See also 10Dxx, 20H10, 22E40, 30F35.]
32N05 General theory of automorphic functions of several complex variables
32N10 Automorphic forms
32N15 Automorphic functions in symmetric domains
32N99 None of the above, but in this section

33–XX SPECIAL FUNCTIONS {33–XX deals with the properties of functions as functions. General systems of orthogonal functions are treated in 42C05. Expansions in orthogonal functions are treated in 42C10, 42C15.}

33–01 Elementary exposition, textbooks
33–02 Advanced exposition (research surveys, monographs, etc.)
33–03 Historical (must also be assigned at least one classification number from Section 01)
33–04 Explicit machine computation and programs (not the theory of computation or programming)
33–06 Proceedings, conferences, etc.
33A10 Exponential and trigonometric functions
33A15 Gamma and beta functions
33A20 Error function, probability integral
33A25 Elliptic functions and integrals
33A30 Simple hypergeometric functions of one and several variables
33A35 Generalized hypergeometric functions of one and several variables (*E*-functions, *G*-functions, *H*-functions, etc.)
33A40 Cylindrical functions, Bessel functions
33A45 Spherical functions (Legendre polynomials and functions, spherical harmonics), ultraspherical polynomials
33A50 Gegenbauer functions
33A55 Lamé, Mathieu, spheroidal wave functions
33A60 Other wave functions
33A65 Orthogonal special functions and polynomials (Čebyšev, Hermite, Jacobi, Laguerre, etc.)

34–XX ORDINARY DIFFERENTIAL EQUATIONS

34–01 Elementary exposition, textbooks
34–02 Advanced exposition (research surveys, monographs, etc.)
34–03 Historical (must also be assigned at least one classification number from Section 01)
34–04 Explicit machine computation and programs (not the theory of computation or programming)
34–06 Proceedings, conferences, etc.

34Axx General theory
34A05 Solutions in closed form, integration by quadratures, reduction of differential equations
34A08 Equations not solved with respect to the highest-order derivative, singular solutions
34A10 Initial value problems: general existence and uniqueness theorems; continuous dependence of solutions on parameters, initial conditions and boundary conditions [See also 45D05.]
34A15 Initial value problems: continuation of solutions
34A20 Differential equations in the complex domain [See also 30D05.]
34A25 Analytical theory: series, transformations, transforms, operational calculus, etc. [See also 44–XX, 47E05.]
34A30 Linear equations and systems
34A34 Nonlinear equations and systems, general
34A35 Differential equations of infinite order
34A40 Differential inequalities
34A45 Theoretical approximation of solutions
34A50 Numerical approximation of solutions {For numerical analysis, see 65Lxx.}
34A55 Inverse problems
34A60 Equations with multivalued right-hand sides [See also 49A50, 49E10.]
34A99 None of the above, but in this section

34Bxx Boundary value problems
34B05 Linear equations
34B10 Multipoint boundary value problems
34B15 Nonlinear boundary value problems
34B20 Weyl theory and its generalizations
34B25 Spectral theory, Sturm-Liouville, and scattering theory; eigenfunctions, eigenvalues, and expansions [See also 42–XX, 43–XX, 45C05, 47Axx, 47Bxx, 47E05.]
34B27 Green functions
34B30 Special equations (Mathieu, Hill, Bessel, etc.) [See also 33–XX.]
34B99 None of the above, but in this section

34Cxx Qualitative theory
34C05 Location of integral curves, singular points, limit cycles
34C10 Zeros, disconjugacy, oscillation and comparison of solutions
34C11 Growth, boundedness of solutions
34C15 Nonlinear oscillations
34C20 Transformation and reduction of equations and systems
34C25 Periodic solutions
34C27 Almost-periodic solutions
34C28 Other types of "recurrent" solutions
34C29 Averaging method [See also 47H10.]
34C30 Manifolds of solutions
34C35 Dynamical systems [See also 54H20, 58Fxx, 70–XX.]
34C40 Equations and systems on manifolds [See mainly 58Fxx, 58Gxx.]
34C45 Method of integral manifolds
34C50 Method of accelerated convergence
34C99 None of the above, but in this section

34Dxx Stability theory [See also 58F10, 93Dxx.]
34D05 Asymptotic properties; characteristic exponents
34D10 Perturbations
34D15 Singular perturbations
34D20 Ljapunov stability
34D25 Popov-type stability

34D30 Structural stability and analogous concepts [See also 58Fxx.]
34D40 Ultimate boundedness
34D99 None of the above, but in this section

34Exx Asymptotic theory
34E05 Asymptotic expansions
34E10 Perturbations
34E15 Singular perturbations, general theory
34E20 Singular perturbations, turning point theory, WKB-methods
34E99 None of the above, but in this section

34F05 Equations and systems with randomness [See also 60H10, 93Exx.]

34Gxx Differential equations in abstract spaces [See also 58D25.]
34G10 Linear equations [See also 47Axx, 47Bxx, 47D05.]
34G20 Nonlinear equations [See also 47Hxx.]
34G99 None of the above, but in this section

34H05 Control problems [See also 49–XX, 93–XX.]

34Kxx Functional-differential and differential-difference equations, with or without deviating (or retarded) arguments
34K05 General theory
34K10 Boundary value problems
34K15 Qualitative theory
34K20 Stability theory
34K25 Asymptotic theory
34K30 Equations in abstract spaces
34K35 Control problems
34K99 None of the above, but in this section

35–XX PARTIAL DIFFERENTIAL EQUATIONS

35–01 Elementary exposition, textbooks
35–02 Advanced exposition (research surveys, monographs, etc.)
35–03 Historical (must also be assigned at least one classification number from Section 01)
35–04 Explicit machine computation and programs (not the theory of computation or programming)
35–06 Proceedings, conferences, etc.

35Axx General theory
35A05 General existence and uniqueness theorems
35A07 Local existence and uniqueness theorems [See also 35H05, 35Sxx.]
35A08 Fundamental solutions
35A10 Cauchy-Kowalewski theorems
35A15 Variational methods
35A20 Analytic methods, singularities
35A22 Transform methods
35A25 Other special methods
35A30 Geometric theory, characteristics, transformations
35A35 Theoretical approximation to solutions
35A40 Numerical approximation to solutions {For numerical analysis, see 65Mxx, 65Nxx, 65P05.}
35A99 None of the above, but in this section

35Bxx Qualitative properties of solutions
35B05 Comparison theorems; oscillation, zeros and growth of solutions
35B10 Periodic solutions
35B15 Almost periodic solutions
35B20 Perturbations
35B25 Singular perturbations
35B30 Dependence of solutions on initial and boundary data, parameters
35B32 Bifurcation
35B35 Stability, boundedness
35B37 Control [See also 49–XX, 93–XX.]

58 #10722: Fried, M; Sacerdote, G. [Sacerdote, George S.]
The existing review consists of several nonconsecutive sentences from the paper and may not do full justice to the paper, which can be regarded as a sequel to the pioneering papers of J. Ax and S. Kochen [Amer. J. Math. **87** (1965), 605–630; MR **32** #2401; ibid. **87** (1965), 631–648; MR **32** #2402; Ann. of Math. (2) **83** (1966), 437–456; MR **34** #1262] and of Ax [ibid. (2) **85** (1967), 161–183; MR **35** #126; ibid. (2) **88** (1968), 239–271; MR **37** #5187]. By using direct quantifier-elimination methods the present authors attempt to come to grips with the finite number of exceptions which occur in many of the theorems in the papers quoted.

In the heading "73–383" should read "73–83".

80d:01004: Seidenberg, A.
In lines 8–9 the reviewer stated that "the data used on Babylonian mathematics use texts published before 1946". This is incorrect; on p. 324 the author refers to Susa mathematical texts published in 1961.

80d:93081: Bertsekas, Dimitri P.; Shreve, Steven E.
In the heading "Mathematical Systems in Economics" should read "Mathematics in Science and Engineering".

80f:73042: Philippin, Gérard A.
The reviewer's remarks should be replaced by the following:
While the reviewer feels that the author's published proof should include more details, he agrees that it is correct with the inclusion of additional details.

80k:12022: Bertrandias, Françoise
In line −2 "J.-P. Ferton" should read "J.-P. Bertrandias".

81a:05011: Olive, Gloria
The reviewer wishes to substitute the following for the original review:
A function $B_k(c)$ is said to be binomial if $B_k(c+d)=$

$\Sigma_j B_j(c)B_{k-j}(d)$. The author here is not restricting her attention to polynomials [cf. G.-C. Rota and R. Mullin, *Graph theory and its applications* (Madison, Wis., 1969), pp. 167–213, Academic Press, New York, 1970; MR **43** #65; A. M. Garsia, Linear and Multilinear Algebra **1** (1973), no. 1, 47–65; J. P. Fillmore and S. G. Williamson, ibid. **1** (1973), no. 1, 67–80; MR **47** #8321ab].

It is shown that a function is binomial if and only if it has a representation as

$$\Sigma\left(\binom{c}{j_0 j_1 \cdots j_k} b_0^{j_0} b_1^{j_1} \cdots b_k^{j_k}\right)$$

summed over $\Sigma j_m = c$, $\Sigma m j_m = k$, where the b_i are any elements in a ring.

The author recursively defines a generalized power $c_{(b)}^k$ by $0_{(b)}^k \equiv 0^k$ and $(c+1)_{(b)}^k \equiv \Sigma_{h=0}^k c_{(b)}^h \{k\}/\{h\}\{k-h\}$ where $\{n\} = 1(1+b)\cdots(1+b+\cdots+b^{n-1})$ and $\{0\}=1$. The author calls these generalized binomial coefficients b-analogues, in contradistinction to q-analogues. b-analogues of Stirling numbers of the second kind and corresponding identities are provided which reduce to standard identities letting $b=0$.

The reviewer now notes that this article is in fact an original report of the discovery of Langford (4,24)-sequences under the generalized definition given in the article. In particular, these sequences are different than those the authors treated earlier [Discrete Math. **28** (1979), no. 1, 81–88; MR 80i:05004].

The following addendum has been provided by the reviewer:
The author uses the local decomposition theorem to prove the following global result. Theorem 1: Let f: $Y \to X$ be a projective birational morphism of smooth algebraic spaces over a field k satisfying $\dim f^{-1}(x) \leqslant 1$ for each point $x \in X$. Then f can be decomposed into a sequence of monoidal transformations with smooth centers of codimension 2.

81h:90134: **Deshpande, Dilip V.**
The name of the second author of the paper, Stanley Zionts, was inadvertently omitted from the heading. In line 7 of the text "the author investigates" should read "the authors investigate". In lines 9–10 "He proposes" should read "They propose".

81i:26013: **Hou, Ming Shu**
In the last two lines, from "$b \geqslant 0$" to the end of the review should read "$y(0) = b \geqslant 0$. Equality in (*) holds if and only if $y = kx + b$ where $k \geqslant -b/a$."

In the last line "MR 81f:76018" should read "MR 81j:73002".

81m:14010: **Singh, Balwant**
The reviewer stated that the stability of $\nu^*(J)$ under permissible blowing up implies an isomorphism between $k' \otimes_k \mathrm{gr}_M(R/J)$ and $\mathrm{gr}_{M'}(R'/J')$. This is not correct. Hence, starting in line 9 from "Through the work" to the end of the review should be replaced by: "The author proves that the stability of $\nu^*(J)$ implies that of $\nu^{**}(J)$."

81m:20030: **Webb, U. H. M.**
In referring to the author, "he" should read "she".

The second remark of the reviewer is not true in general. There exists a finite unramified covering of X which admits a (bimeromorphic) fiber bundle structure described there. However, as for X itself, one can just show that the Iitaka fibration of X is bimeromorphically equivalent to an analytic fiber bundle with fiber being a complex torus, but the base variety S is not always of general type.

82c:28004: **Scozzafava, Romano**
The following remark by the reviewer was inadvertantly omitted:
(0) As proved by A. Sobczyk and P. C. Hammer [Duke Math. J. **11** (1944), 839–846; MR **6**, 129; see also D. Maharam, Sankhyā Ser. A **38** (1976), 44–59; MR **57** #12810], the range of μ equals $[0,\mu(\Omega)]$ provided μ is strongly nonatomic. This result implies Theorem (i).

82c:33002: **Andrews, George E.**
In the second displayed formula "$=$" should read "$\times$". In line −14 "$\Pi_{i<i\neq j\leq n}$" should read "$\Pi_{1\leq i\neq j\leq n}$". In line −11 "$e^{i\pi\theta_j}$" should read "$e^{ik\theta_j}$".

82c:45004: **Ramm, A. G.**
The reviewer wishes to substitute the following for the original review:
For the integral equation $Rh = \int_\Delta R(y,z)h(z)\,dz = f(y)$, $y\in\Delta=[t-T,t]$, $T>0$, a class $\mathfrak{R}$ is defined for the kernel $R(x,y)$ by $R(x,y)=\int_\Lambda r(\lambda)\varphi(x,y,\lambda)\,d\rho(\lambda)$, $r(\lambda)=(r_{ij}(\lambda))=(P_{ij}(\lambda)Q_{ij}^{-1}(\lambda))$, $1\leq i,j\leq d$. Here $\varphi(x,y,\lambda)$, $d\rho(\lambda)$, and Λ are the spectral kernel, the spectral measure of a scalar selfadjoint operator L, and the spectrum of L, respectively. Let $R(x,y)\in\mathfrak{R}$, $f\in H_a$, $\alpha=(n-m)/2$ and assume that $P_{ij}, Q_{ij}>0, \lambda\in I$, $\det A(\lambda)>0$ for $\lambda\in I$, where $A_{ij}(\lambda)=P_{ij}(\lambda)Q_{ij}^{-1}(\lambda)Q(\lambda)$, m is even and $r(\lambda)$ is ρ-almost everywhere positive definite.
For this class of systems of integral equations, the author obtains the explicit formula for the solution, and proves the existence, uniqueness and stability of the solution. The theory does not require the factorization of the matrix functions. Some remarks are given concerning the upperbound of the eigenvalue and the formula for the error estimate.

82c:54002: **Howes, Norman R.**
In column 1, line −6 "MR" should read "Zbl".

In line −1 "$N(4)$" should read "$N(44)$".

82i:68027: **Schmidt, Günter**

The reviewer wishes to add the following remarks:

The author presents an example of his partial relation algebras $\mathfrak{B}$ which contains, among others, the following Boolean matrices: $R=(0,1)$, ${}^{R}I=(1)$, $I^{R}=\binom{0}{1}$. This clarifies the axioms concerning nonsquare matrices, and how they deviate from the usual relation algebras.

If $P=(Z,G,\theta,a,e)$ is a program where $Z=(A,E)$, $B=A^{\mathsf{T}}E$, etc., then B^* is called its complete behaviour, $S=B^*\wedge\overline{BL}^{\mathsf{T}}$ its terminating behaviour, and $\Sigma=a^{\mathsf{T}}Se$ its effect (Wirkung). A program P is said to be deterministic if B is single-valued. A relation R is called a point set, or vector, or predicate, if $R=RL$. If v $[n]$ is a relation called a precondition ($v=vL$) [postcondition ($n=nL$)], one says P is correct with respect to v and n if $\Sigma^{\mathsf{T}}v\subset n$. The weakest precondition $v_{\max}$ corresponding to a given postcondition n is $v_{\max}=\overline{\Sigma\bar{n}}$. Theorem 7.2: $\Sigma^{\mathsf{T}}v\subset n$ if and only if there exists a predicate $Q=QL$ such that $B^{\mathsf{T}}Q\subset Q$, $v\subset a^{\mathsf{T}}Q$ and $e^{\mathsf{T}}(Q\wedge\overline{BL})\subset n$. In the proof one puts $Q=B^*av$. A concatenation $(C;D)$, where

$$B=\begin{pmatrix}0&C&0\\0&0&D\\0&0&0\end{pmatrix},\qquad a=\begin{pmatrix}I\\0\\0\end{pmatrix},\qquad e=\begin{pmatrix}0\\0\\I\end{pmatrix}$$

is correct if there exists a $Q=(x,y,z)^{\mathsf{T}}$ such that $v\subset x$, $z\subset n$, $C^{\mathsf{T}}x\subset y$, $D^{\mathsf{T}}y\subset z$. It is unclear how B,Q are obtained and what their meaning is. A loop, repeat R until p, where

$$B=\begin{pmatrix}0&R&0\\\bar{p}&0&p\\0&0&0\end{pmatrix},$$

is correct if the same Q exists such that $\bar{p}\wedge y\subset x$, $R^{\mathsf{T}}x\subset y$, $p\wedge y\subset z$.

A graph G is said to be progressively finite if its associated relation B satisfies $\overline{B\bar{X}}\subset X\Rightarrow X=L$. The initial segment $J(B)=J(B)L$ is introduced as a minimal fixed point of a (noncontinuous) functional $\tau(X)=\overline{B\bar{X}}$. The program P is said to be totally correct of type 1, 2, 3, if $v\subset a^{\mathsf{T}}\vee\bigvee_{h=0}^{\infty}\overline{B^hL}\wedge a^{\mathsf{T}}\overline{Sen}$, $v\subset a^{\mathsf{T}}J(B)\wedge a^{\mathsf{T}}\overline{Sen}$, $v\subset\Sigma n=a^{\mathsf{T}}Sen$, respectively. The type $i+1$ follows from type i for $i=1,2$. For deterministic programs there is no difference among the types.

The usual program definition (in any programming language) does not involve any homomorphism, but it does involve the execution definition. In actual programs, concrete states (which are functions from variables into values) are concerned, and the transition function is determined by the execution of all available instructions (assignments, tests, etc.). Here only abstract states are concerned, but what is missing are basic instructions and their execution. No homomorphism can help in this crucial point, because homomorphism only reduces one monadic state function to another one, and does not define any such. Therefore many interesting definitions and results concerning correctness of programs are, probably, only formal without any revelance to actual programs and their correctness.
